

# Code Review

1. In the first project - The files are not divided into folders, there should be pages and specs folders in the test folder
2. The .yaml file is not added
3. In the first project - `BeforeEach` hook is not added
4. In the first project - Locators are written to a single file and are not included in logically separated files
5. In the first project - Allure report doesn't work
6. Big amount of different methods, it could be more succinct
7. In the second project - The unnecessary files and folders are not added into the .gitignore file.
8. Sometimes the unnecessary files and folders are not added into the .gitignore file.
9. Sometimes the permanent data is not recorded in a separate json file
