Code Review Task
1. Incomplete README.md: missing essential information in the README.md file(project description, requirements, steps to install, steps to run tests, steps to generate report, etc)
2. The same testing data is always used for testing input fields. Random value generation is not used to test input fields, which can lead to the pesticide paradox
3. There is no need for two autotests that check the same thing, namely 'login with valid credentials' and 'login with valid credentials read data from fixture' which are in the login.test.ts file in the tests folder.
